

# Dockerized shopping list app

**Instructions:** Build a shopping list using `create-react-app` and Dockerize the app when complete.

## **Basic Requirements:**

- Use create-react-app to jump-start your app
- Have components related to a shopping list:
  - Ex. List, Items...
- You should be able to:
  - Add an item to the shopping list
  - Remove an item from the shopping list
  - Add an item to the cart (once you have the item, it's now in your shopping cart)
  - Delete the entire shopping list
- **Data:** Can be saved in memory
- **Docker:** Dockerize it when complete! Run multiple containers of your app to ensure it's working correctly, send it to a partner and have them check it out.

## **Advanced Content:**

- **Style:** Make it look NOT plain. Add some CSS, make it look like how you would like a shopping list to look.
- **Database:** Store items in a database!
